Java Interview Readiness Test-01

- 1) What is software? Differentiate between **system software** and **application software** with one example each.
- 2) Explain the term “**Write Once, Run Anywhere (WORA)**” in Java with internal working.
- 3) List all Java primitive data types. Which are **non-primitive**, and how are they different?
- 4) Explain the memory allocation difference between primitive data types and objects.
- 5) What is a class in Java? Can a class exist without a main() method? Justify.
- 6) Explain the purpose of public static void main(String[] args) with each keyword meaning.
- 7) What is the difference between:
 - String s = "Java";
 - String s = new String("Java");
- 8) What is String Constant Pool (SCP)? Why is it important?
- 9) **What will be the output? Explain why.**

```
class Test {  
  
    public static void main(String[] args) {  
  
        int a = 10;  
  
        int b = a;  
  
        b = 20;  
  
        System.out.println(a);  
  
    }  
  
}
```

- 10) What will be the output?**

```
class Test {  
  
    public static void main(String[] args) {
```

```
String s1 = "Java";  
String s2 = "Java";  
System.out.println(s1 == s2);  
}  
}
```

11) What will be the output?

```
class Test {  
    public static void main(String[] args) {  
        String s1 = new String("Java");  
        String s2 = new String("Java");  
        System.out.println(s1 == s2);  
    }  
}
```

12) What will be the output?

```
class Test {  
    public static void main(String[] args) {  
        String s1 = "Java";  
        String s2 = new String("Java");  
        System.out.println(s1.equals(s2));  
    }  
}
```

13) Identify the error (if any):

```
class Test {  
    int x = 10;
```

```
public static void main(String[] args) {  
    System.out.println(x);  
}  
}
```

14) Write a Java program to:

- Accept values from command line (args)
- Print the sum of two integers

15) Write a program to:

- Declare an array of 5 integers
- Find and print the **largest element**

16) Write a program to:

- Create a class Student
- Declare variables: name, age
- Display values using a method

17) Write a program to:

- Compare two strings without using .equals()
- Explain the limitation of your logic

18) Write a program to:

- Create two string variables
- Check:
 - whether they refer to same object
 - whether they have same content
- Print results with explanation

Q1. Which of the following is an example of system software?

- A) MS Word B) Operating System C) Browser D) Calculator
-

Q2. Why do we use programming languages?

- A) To communicate with hardware B) To write instructions executable by computers
C) To design UI D) To store data
-

Q3. Java is platform-independent because:

- A) It uses OS-specific code B) It compiles to machine code directly
C) It uses JVM D) It runs only on Windows
-

Q4. Which of the following is NOT a primitive data type?

- A) int B) float C) String D) char
-

Q5. What is the size of int in Java?

- A) 2 bytes B) 4 bytes C) 8 bytes D) Depends on system
-

Q6. Which of the following is correct about primitive variables?

- A) Stored in heap B) Store reference C) Store actual value D) Stored in SCP
-

Q7. Which keyword is used to define a class?

- A) define B) object C) class D) struct
-

Q8. Can a Java class exist without main() method?

- A) No B) Yes C) Only in interface D) Only in abstract class
-

Q9. What does static mean in main method?

- A) Method cannot run B) Belongs to class
C) Private access D) Not callable
-

Q10. Which part accepts command-line arguments?

- A) main() B) args C) static D) void
-

Q11. Where are string literals stored?

- A) Heap B) Stack C) SCP (String Constant Pool) D) Registers
-

Q12. What will be the output?

```
String s1 = "Java";
```

```
String s2 = "Java";
```

```
System.out.println(s1 == s2);
```

- A) false B) true C) error D) depends on JVM
-

Q13. What will be the output?

```
String s1 = new String("Java");
```

```
String s2 = new String("Java");
```

```
System.out.println(s1 == s2);
```

- A) true B) false C) error D) null
-

Q14. What will be the output?

```
String s1 = "Java";
```

```
String s2 = new String("Java");
```

```
System.out.println(s1.equals(s2));
```

- A) true B) false C) error D) null
-

Q15. Which is stored in heap?

- A) String literal B) Primitive C) Object created using new D) Method
-

Q16. Output of the program:

```
int a = 10;  
int b = a;  
b = 20;  
System.out.println(a);
```

- A) 10 B) 20 C) Error D) 0
-

Q17. Identify the error:

```
class Test {  
    int x = 10;  
    public static void main(String[] args) {  
        System.out.println(x);  
    }  
}
```

- A) No error B) x must be static C) main must not be static D) class must be abstract
-

Q18. How do you declare an array?

- A) int arr; B) int arr[]; C) array arr[]; D) int arr(5);
-

Q19. Which is correct array initialization?

- A)** int arr = new int[5]; **B)** int arr[] = new int[5]; **C)** array int[5]; **D)** int arr[] = int[5];
-

Q20. How to access command-line arguments?

- A) args[i] B) main[i] C) system.argv D) input[i]
